

For our Subsidiary at Jaipur, India we are searching for a

IT Administrator / DevOps (f/m/d)

SCALE is a key development partner for major Automotive OEMs worldwide in the domain of software development for simulation process and data management systems. SCALE roots for innovation, creativity, and premium quality software solutions. Our core areas of expertise include engineering and IT services, CAE methods development, finite element software development, training, and software solutions for CAE simulation process and data management.

Your Responsibilities

- Providing first- and second-level support for IT-related issues to end users for hardware, software, and system-related issues
- Troubleshooting and resolving hardware and software issues on Linux and Windows devices.
- Administration and maintenance of the company's internal IT infrastructure (networks, workstations, peripheral devices and related systems)
- Installing, configuring, and updating hardware and software across Linux and Windows systems using automation and configuration-management tools such as Puppet
- Support the implementation and maintenance of IT security measures across systems and networks, including antivirus, backups and recovery processes
- Ensure appropriate access to systems and resources in accordance with company policies and requirements
- Managing user accounts, access rights and permissions using OpenLDAP
- Writing automation scripts using Bash and Python for system administration and automation tasks
- Assisting and closely collaborating with our IT Administrator and technical colleagues in Germany
- Maintain clear and up-to-date documentation of IT systems, configurations, processes, troubleshooting approaches, and solutions to recurring IT-related issues
- Supporting with onboarding and offboarding activities and tasks from an IT access perspective
- Supporting client-facing teams in technical activities as required like technical meetings and demonstrations, system setups, connectivity, and other practical requirements

Job Requirements

Technical Requirements

- Must-Have Skills
 - › Degree in Computer Science, Information Technology, or a comparable qualification
 - › At least 5 years of experience as an IT Administrator, System Administrator or in a similar role
 - › Strong practical knowledge and hands-on experience with both Linux and Windows operating systems
 - › Good knowledge of networking concepts including TCP/IP, routing and firewalls
 - › Experience with containerization technologies and tools such as Docker
 - › Familiarity with container orchestration platforms such as Kubernetes or similar
 - › Programming skills in Python and Bash for automation and deployment tasks
 - › Hands on experience of working with OpenLDAP and Puppet
 - › Experience with version control systems, particularly Git
- Desirable Skills
 - › Hands-on experience with one or more major cloud providers (AWS, Microsoft Azure, Google Cloud Platform)
 - › Experience with Helm for managing Kubernetes deployments and creating Helm Charts
 - › Knowledge of Terraform for provisioning and managing cloud infrastructure
 - › Familiarity with the AWS Cloud Development Kit (CDK)
 - › Experience with PostgreSQL as a relational database management system

Non-Technical / Soft Skills:

- Strong analytical thinking, structured problem-solving and troubleshooting capabilities
- Ability to work independently and take ownership of assigned tasks
- Excellent written and spoken English
- Strong communication skills, team-oriented and a collaborative mindset
- Ability and willingness to coordinate with and support teams in an international working environment

What We Offer

- Unique opportunity to develop your career in a start-up environment and a rapidly growing international team
- Flat hierarchy, shorter decision paths, and an accountable working environment
- Competitive compensation inclusive of pay and bonus, and social benefits
- Regular possibilities for further development and training
- Modern workplace and equipment
- Group Medclaim policy
- Personal Accident policy
- Flexible working time, with home office options
- Supportive international team structure with close contact to our German IT colleagues

Why Do We Need You?

SCALE GmbH is in the process of expanding its business in India and has established its subsidiary SCALE India to tap into India's rich software developer as well as CAE application engineering community, and benefit from the availability of a highly qualified workforce. To support this motive, in 2022 SCALE GmbH has laid foundations of a technical development centre in the culturally and economically rich city of Jaipur, Rajasthan.

The rapidly growing IT/ITeS and software development ecosystem of Jaipur and its close vicinity to the Delhi-NCR Region is a key contributing factor in SCALE India's success in developing high quality, cutting-edge and scalable software solutions for its customers in India and Abroad. SCALE India's software development and application engineering team functions as an extension of the team at various locations in Germany and USA, assisting in the development as well as consulting of the SCALE.sdm products and thus contributing to the success of the brand SCALE.

To support our growing IT infrastructure and ongoing operations in India, we are seeking an experienced IT Administrator / DevOps professional who will be responsible for maintaining and developing our internal IT infrastructure, and contributing to automation, cloud, and DevOps-related activities. You will work closely with our IT team and colleagues in Germany, serving as an important link between our Indian and German teams.

Aspiring to Skyrocket Your Career and Be a Part of SCALE India's Success Story?
